

## II. SPECIFICATION AMENDMENTS

Please insert the following on page 1, between lines 2 and 3:

### BACKGROUND OF THE INVENTION

#### 1. Field of the Invention

Please amend the paragraph on page 6, line 25 through page 7, line 32 as follows:

BI Telephone circuitry 25 is contained within housing 8 when top shell 10 and bottom shell 12 are coupled. Telephone circuitry 25 has a front 58, a back 60, a top 62 and a bottom 6463 as shown. The telephone circuitry 25 may include circuitry 52 such as transmit and receive circuitry for radio communications, audio processing circuits for coding and decoding voice communications, and a control circuit for controlling the operation of the cellular phone. More or less circuitry or features could be provided. The telephone circuitry 25 may further include a speaker 43, a display 44, keypad contacts 46, a microphone 48 and a power interface 50. Telephone circuitry 25 is shown as a single arrangement. More or less circuit arrangements may be provided without departing from the invention. Speaker 43 may allow the user to hear communications from third parties and may be used as a tone or sound indicator to determine that a key has been pressed or to indicate a status condition such as weak signal, busy signal or otherwise. Display 44 may allow the user to see phone status such as number called, date, directory or may alternately act as a interface for text or images such as

B1  
for mail or internet communications or otherwise. Keypad contacts 46 interface with keypad interface 20 allowing the user to input numbers or data. Keypad contacts 46 are shown as being exemplary and may alternately be touch contacts such as electrostatic or optical contacts or otherwise without departing from the invention. Microphone 48 is provided to allow the user to speak or enter sound. Power interface 50 is provided with seal 54. Exemplary power interface 50 is shown as a contact based interface but may alternately be a inductive based power interface, optical based power interface or otherwise. The description above is merely intended to be exemplary. More or less features could also be provided. For example, features such as an antenna, a battery, headset connections, docking interfaces, status indicators, network connections, additional user interfaces, or otherwise may or may not be provided complimenting telephone circuitry. 25.
